

FOR IMMEDIATE RELEASE

Pasadena Insurance Agency Inc Joins WorkCompWisdom Education Effort

Houston, Texas – April 9, 2009 – Pasadena Insurance Agency Inc has joined the WorkCompWisdom program, a nationwide initiative to educate employers on how losses affect their premium costs and why “low bid” is not the best way to buy work comp insurance.

The WorkCompWisdom program is open to insurance professionals who utilize ModMaster, a software tool that analyzes the workers compensation experience rating factor, also known as the mod or ex-mod. “Employers often don't realize they can lower their mod and directly save on their insurance costs,” said Tim Coomer, CEO of ModMaster development company Specific Software Solutions. “Or, they are satisfied with a mod of 1.0, which oftentimes means they’re spending much more than they have to on premiums.”

As a local expert on work comp mods, Pasadena Insurance Agency Inc has the knowledge and tools to perform an analysis that will help you:

- verify your mod is accurate
- understand how much your mod could be improved
- show you how much specific losses are costing you in additional premium dollars over the 3 year period they contribute to your mod
- give you insight as to what's contributing most to your mod: too many losses, a few severe losses, or a combination of both.
- help you anticipate your future mod values - and put you on the path to improving your mod for good.

Specific Software, which will assist agencies in distributing WorkCompWisdom educational materials, also maintains the award-winning WorkCompEdge blog.

Pasadena Insurance Agency, Inc. has a specialty in commercial property & casualty insurance and risk management services. It further specializes in workers compensation insurance. Pasadena Insurance offers free WorkCompWisdom analysis.
