

The road to saving lives

Motor vehicle safety . . .

Help prevent motor vehicle deaths. Such deaths happen on average once every 12 minutes, and injuries occur every 11 seconds, according to the National Highway Traffic Safety Administration.

You can help protect yourself and those around you by driving safely and properly maintaining your car:

- Wear seat belts at all times.
- Check that your lights and wipers work properly.
- Inspect your tires for wear and proper air pressure.
- Obey speed limits and all other traffic laws.
- Never drink and drive.
- Drive courteously. Yield the right of way whenever there is a question.
- Schedule regular checkups to make sure your car is mechanically sound.
- Use signals when changing lanes or turning.
- Equip your car with basic safety tools—flashlight, first-aid kit and flares or warning lights.
- Drive defensively.
